FOR FIELD AND GARDEN

ALFALFA and GRASS SEED *with priceless ingredients*

Sam Bober and some of the State and International Blue Ribbons for Bober's Seeds.

Although experts can measure the purity and germination of seed, the most powerful microscope does not permit them to measure the most vital factor—**INHERITANCE**.

HERITAGE is carried in the blood line of the germ. It controls the yield, hardiness, drought resistance, and all other factors essential to production of profitable hay crops and pastures. You usually do not look for these priceless ingredients in seed produced under pampered conditions of irrigation and year round mild temperatures.

HAY MEADOWS and PASTURE MIXTURES planted with Bober's **NORTHERN GROWN ALFALFA** and Grass seed produce the **MOST MEAT, MILK AND MUTTON** per acre because the higher altitude, semi arid country here furnishes the most **SEEDLING VIGOR, YIELDING ABILITY, WINTER HARDINESS** and

DROUGHT RESISTANCE. Rigorous climatic conditions (including 35 degree below zero weather in winter and 110 degree hot and dry weather in the summer, along with continuous heaving and thawing of the ground in spring and fall) do the job of eliminating the weaker plants. This job which **NATURE** does in this area to produce **HARDINESS, YIELDING ABILITY** and **DROUGHT RESISTANCE** is your insurance for better returns from the season's work. Seed produced under pampered conditions, no matter under what name, label or slogan, cannot give you what **NATURE** produces on the northern foothills of the Black Hills. By ordering **NOW**, you can get the most value for your money.

Sincerely yours,
Sam H. Bober & Sons
Rapid City, South Dakota

P. S. The prices quoted on our alfalfa seed are the lowest since 1933. Write us for special quotations on orders (individual or pooled) of 1000 lbs. or more of legumes or grasses. For your protection all our alfalfa seed is registered with the United States Verified Origin Service, so that you can be sure you are really getting Northern Seed with Northern Vigor and Yielding Ability.

TERMS OF SALE AND SHIPMENT

Payment: Cash in full with order. Money order, bank or check on good bank. We ship promptly on receipt of your order. All items are priced f.o.b. Rapid City.

PLEASE ORDER ALL FIELD SEED AT ONCE

Help us, yourself, and the railroads, by letting us fill your order in midwinter when transportation is not crowded and when help is easier to get.

Your Cooperation Will Be Appreciated.

BUY EARLY AND SAVE MONEY!

PROF. HANSEN'S SIBERIAN COSSACK ALFALFA

Grows in Every State in the Union

Farmers nearly everywhere prefer Cossack alfalfa because it produces more and finer hay, is drought resistant and withstands severe winter weather without material injury.

ASIATIC BLOOD TURNS THE TRICK

Cossack alfalfa shows the greatest vigor of spring growth. It also recovers quicker for new growth for second and third hay crops while other strains lie dormant a while after a cutting.

SURVIVAL VALUE

In Cossack Alfalfa you not only have the best yield in alfalfa hay because of its bushier fine stemmed plants, but Cossack Alfalfa withstands more below zero freezing as well as hot and dry summers. **Bober's Cossack Alfalfa seed is the Survival of the Fittest, from fields that have been producing for as long as 42 years.**

30 lbs. \$9.00; 60 lbs. \$17.30; 100 lbs. \$28.00

RANGER ALFALFA Resists Wilt

Ranger is a result of crossing and recrossing Cossack, Ladak, Turkestan and Hardistan alfalfa. It is resistant to bacterial wilt, cold and dry winter. Ranger permits longer rotations with alfalfa, and greater yield of forage.

1 bu. \$19.00; 100 lbs. \$31.00

LADAK ALFALFA

Long lived; extremely winter hardy; well suited for midwest states and also for higher elevations; drought and wilt resistant; leafy plants for quality hay of high feeding value.

1 bu. \$18.20; 100 lbs. \$29.50

GRIMM-TYPE ALFALFA

A hardy alfalfa for midwestern farms. Good resistance to winter killing. Not recommended in areas where bacterial wilt bothers alfalfa.

1 bu. \$16.70; 100 lbs. \$27.00

RANGER-COSSACK ALFALFA 50-50 MIXTURE

Combines wilt resistance with higher yield of best quality alfalfa. Starts growth earlier in the spring, grows late into fall . . . does well whether climate is moist and cool and stands hot weather of 115 degrees in the summer and 40 degrees below zero in winter.

1 bu. \$18.20; 100 lbs. \$29.50

VERNAL ALFALFA

A new variety introduced by the U.S.D.A. Because of its high productivity and hardiness, Cossack was the main parent. Vernal is highly resistant to wilt and a particularly good yielder in wilt infested areas. On heavier soils, planting rate of 10-12 lbs. per acre is recommended.

1 bu. \$27.00; 100 lbs. \$44.00

The late Prof. N. E. Hansen and a Single Plant of Cossack Alfalfa

All our seed is free from noxious weeds. Prices on alfalfa include the cost of the bags and Free Inoculation with the seed if ordered on or before February 1

BLACK HILLS HARDY ALFALFA SEED

RHIZOMA alfalfa

THE NEW DUAL PURPOSE VARIETY

This is an actual photo of the root system of a 4-year-old Rhizoma Alfalfa Plant (Photo courtesy of University of British Columbia). Note how well this vital living part of the plant is organized for production, with the deep tap root for subsoil moisture and the Rhizomes for surface moisture and for sending up new stems.

THE RHIZOMA STORY

Rhizoma alfalfa is the result of continuous breeding since 1917 under the direction of the University of British Columbia in Canada. It is the result of selective crossing and recrossing Grimm with the yellow-flowered creeping Falcata. (Introduced from Siberia in the early 1900's by Professor Hanson.)

THE MOST SIGNIFICANT DIFFERENCES BETWEEN RHIZOMA AND ORDINARY ALFALFAS ARE (1) the Multiple Root System; (2) the Low Set Crown (at or below the ground surface). **PRIMARILY BECAUSE OF THESE DEVELOPMENTS, RHIZOMA ALFALFA MEANS TO YOU:**

MORE GRAZING—Since the crown is below the ground surface, the plant cannot be injured by overgrazing or trampling. Stands actually thicken with grazing. Competes and should be planted with grass.

MORE HAY—Rhizoma Alfalfa stands up to 42 in. high. In actual tests—outyielding Grimm with leafier, finer alfalfa of higher protein.

MORE DROUGHT RESISTANCE—The multiple root system utilizes every drop of available moisture.

LESS SEED NEEDED—Because of its spreading habits (Rhizomes automatically thicken up the field) Rhizoma should be planted at only one-fourth to one-third the normal alfalfa seeding rate in your area.

GREATEST RESISTANCE TO WINTER KILLING—In field tests in the Canadian Peace Valley it survived: (1) 60 below zero temperatures, (2) Flooding, (3) Ice Sheets.

Of all the alfalfa we have grown on the Bober Seed Farms, RHIZOMA has shown the most outstanding results. We know that you will want to plant RHIZOMA on your own farm. Please order early as our supplies of this new hybrid are limited.

10 lbs. \$12.50; 25 lbs. \$30.00; 50 lbs. \$58.00; 100 lbs. \$115.00

Hardy FARM BELT ALFALFA

A mixture of Cossack, Grimm and Dakota No. 12 alfalfa seed, not as bright or as plump as the No. 1 grade described on page 3. Ninety-eight per cent purity, free from any foul weeds, 80 per cent live seed. Real value in northern hardy alfalfa seed.

1 bu. \$13.70; 100 lbs. \$22.00

DAKOTA No. 12 ALFALFA

A native of the dry land in the Black Hills area of South Dakota. It is hardier, more drought resistant and higher yielding than ordinary northwestern Alfalfa.

1 bu. \$16.10; 100 lbs. \$26.00

NEW ARASAN TREATMENT FOR ALFALFA SEED

We will treat the alfalfa seed you order from us at a cost of \$1.25 per 100 lbs. of seed, actual cost of Arasan and work. Many seed companies charge \$2 or more for this service under a fancier name.

NORTHERN GROWN SOIL BUILDERS

LADINO CLOVER likes company

Poultry likes Ladino clover straight because it comes early and stays late. . . . For cattle and sheep it is best in mixture with Lincoln Brome grass and other palatable grasses. . . If you really wish to make money with beef cattle, we suggest a mixture of 12 pounds of Lincoln Brome grass, 2 pounds of the new Rhizoma pasture-type alfalfa and 1 pound of Ladino clover.

Price of Ladino Clover: 10 lbs. \$8.50

Larger amounts, 80c per pound

Best Northern DWARF SWEET CLOVER

Long recognized for its soil building abilities, this Biennial clover is becoming increasingly used as a pasture and green manure crop. Also efficiently combined with Crested Wheat Grass and Brome Grass to make a better hay and pasture and to prevent sod-bound grass conditions.

Yellow Dwarf Sweet Clover
50 lbs. \$7.75; 100 lbs. \$15.00

Tall White Biennial Sweet Clover
50 lbs. \$8.50; 100 lbs. \$16.50

BIRDSFOOT TREFOIL A Legume That Lasts

Here's the kind of legume pasture cows dream about! As feed, birdsfoot trefoil is just as good as alfalfa and red clover. In pastures, it'll take a lot of heat, heavy grazing; has never caused a case of bloat. Plant 5 pounds per acre. Also include it in pasture mixtures. Grows well in slightly alkaline soils.

An excellent supplementary pasture in summer and fall when other pastures are at low ebb. It **DOUBLES** the pasturing capacity when mixed with bluegrass or brome grass.

10 lb. \$6.50; 25 lbs. or more 61c per lb.

ALSIKE CLOVER

Particularly adapted to cool moist climates and low ground. Produces well at high altitudes. Our hardy seed produced at 5,000 feet elevation in the Black Hills.

50 lbs. \$15.00; 100 lbs. \$29.50

STRAWBERRY CLOVER

A perennial low growing variety that spreads by creeping stems. Thrives in normal soil but is particularly valuable on alkali soils where other plants won't grow. Drought resistant and at the same time very successful on irrigated land. Try 2 lbs. of strawberry clover with 4 lbs. tall wheatgrass for highest pasture carrying capacity.

1 lb. \$1.75; 5 lbs. \$8.00;
10 lbs. \$15.00

MADRID SWEET CLOVER

A new yellow-flowered variety rapidly replacing other strains in the midwest. Two weeks earlier than White Sweet Clover and a much heavier yielder. Much finer stemmed and leafier and highly resistant to fall frosts. Order early—Supply limited!

1 bu. \$12.00; 100 lbs. \$19.50

HUBAM ANNUAL SWEET CLOVER

CHAMPION SOIL BUILDER

Hubam Annual Sweet Clover is becoming more and more important to the farm rotation plan as the importance of the green manure crop becomes better realized. It produces a heavy top growth the first year, improves the soil, and makes an excellent beef pasture. Farmers report 10 to 25 per cent increase in corn and grain yields per acre after plowing under Hubam Clover. For quick grazing and soil improvements, plant 12 pounds of Hubam Clover seed per acre with your oats, wheat, or barley. You can harvest a grain crop and then plow your Clover without danger of volunteer stands in following crops.

50 lbs. \$13.50; 100 lbs. \$24.00

HARDY GRASSES FOR HEALTHY PROFIT

PERENNIAL WHEATGRASSES

Noted for their early spring growth with high production of lush forage, Wheatgrasses have been unexcelled for pasture, hay and the re-vegetating of depleted range and farm land.

INTERMEDIATE WHEATGRASS GREEN PASTURE ALL SUMMER

Vigorous seed, germinating within a week, producing fast growing seedlings. . . . Plants begin growing early in the spring reaching height of 3 or 4 feet by midsummer. **INTERMEDIATE** is a **PERENNIAL SOD FORMING GRASS** which spreads by means of creeping root-stocks . . . stays green throughout the summer. Leafy . . . relished by all classes of livestock. . . . Plant 4 to 6 pounds per acre on firm seedbed.

Produces **HEAVY PASTURE** . . . Nutritious Hay . . . **CASH SEED CROP.**

10 lbs. \$9.00; 50 lbs. \$43.00; 100 lbs. \$85.00

CRESTED WHEATGRASS

Crested comes on earlier in the spring than any other grass, and stays green later in the fall. It is the hardiest and most drought resistant grass yet discovered and shows no bad effect from heavy grazing.

For best results, alfalfa or yellow

sweet clover should be planted with Crested. Crested Wheatgrass contains as much as 35% protein when it is a young plant, which explains the phenomenal gains obtained from pasturing it. Planting rate—8 to 12 lbs. per acre.

Fairway, finer, leafier and more nutritious strain Crested Wheatgrass

50 lbs. \$18.00; 100 lbs. \$35.00

No. 1 Standard Crested Wheatgrass 50 lbs. \$17.50; 100 lbs. \$34.00

WESTERN WHEATGRASS

Western Wheatgrass makes rapid growth by means of strong creeping rootstocks producing good ground cover and heavy sod. It is one of the most palatable of grasses for high protein and especially relished by livestock. Western Wheatgrass is a high hay producer, drought resistant and will withstand extremes in temperature.

Plant from 6-10 lbs. per acre.

50 lbs. \$26.50; 100 lbs. \$52.00

SLENDER WHEATGRASS

Also called Western Ryegrass. It grows in tall erect bunches. Resistant to drought and cold. Grows in slightly alkali land. Palatable and nutritious.

50 lbs. \$11.50; 100 lbs. \$22.00

TALL WHEATGRASS

★ **DROUGHT RESISTANT.**

★ **VERY ALKALI TOLERANT**—The only good producer on subirrigated alkali soil.

★ **A REAL BEEF PRODUCER**—The Colorado Experiment Station showed a gain of 227 lbs. of beef per acre.

★ **TOP HAY PRODUCER**—Has yielded up to 5½ tons forage in one cutting.

★ **PLANT ONLY** 4 to 6 lbs. per acre.

50 lbs. \$17.50; 100 lbs. \$34.00

OTHER PASTURE GRASSES

SMOOTH BROME GRASS

Highest Yielding and Most Palatable of All Perennial Grasses

Smooth Brome grass is hardy and permanent and it roots deeply, sometimes 4 and 5 feet deep, making it stand dry and hot weather as well as the coldest winters.

One of the first green grasses in the spring and the last in the fall, and keeps green all summer when other grasses are dried.

Plant 12 to 20 pounds per acre, depending on fertility and moisture conditions, where it is seeded alone. Do not cover deeply— $\frac{1}{2}$ inch deep is sufficient.

Heavier Yielding—Lincoln Brome grass, 50 lbs. \$15.00; 100 lbs. \$29.50

Canada No. 1 Brome grass, 50 lbs. \$11.75; 100 lbs. \$23.00

NORTHERN TIMOTHY

Well adapted to northern half of United States and mountainous regions of the south. Sow 15 to 20 pounds per acre alone or 10 pounds with clover.

50 lbs. \$9.00; 100 lbs. \$17.50

DOMESTIC RYEGRASS

A short-lived perennial we favor because of its early spring growing habit, high palatability, excellent growth, and high production.

50 lbs. \$7.00; 100 lbs. \$13.50

ALTA FESCUE—RYEGRASS—90-10 MIXTURE

Alta Fescue is a new all purpose, all location grass, high yielding and palatable for pasturing cattle and sheep. Grows on wet or dry, acid or alkali soil. Takes a year to establish but lasts 20 years or more. That's why we blend 90% Alta Fescue with 10% Ryegrass because this palatable Ryegrass comes right up a week after planting and furnishes hay or fine pasture while acting as nurse crop for Alta Fescue.

\$16.00 per 100 lbs.

ORCHARD GRASS

Particularly useful on erodible soils where irrigation is available or high rainfall occurs. Generally used in combination with alfalfa or clover. Recommended seeding rate, 5-8 lbs. or orchard grass with 3-5 lbs. Cossack alfalfa.

50 lbs. \$23.00; 100 lbs. \$45.00

DWARF ESSEX RAPE for quick pasture

Popular for hog and sheep pasture. Keeps growing out as it is eaten off and is not easily damaged by frost.

10 lbs. \$1.80; 50 lbs. \$8.25

BOBER'S pre-blended

More Early and Late Grazing with Bober's Perennial Pasture Mixtures

Partly idle pastures are like partly idle trains. A partly empty train can lose more money for a railroad than one which isn't running at all. And a pasture which works at only part capacity is equally hard to justify. Bober's pasture mixtures supply nutritious grazing the year around, especially where there is not much snow on the ground, since the wheatgrass part of the pasture can be grazed in winter months too, while other grasses are dormant.

PASTURE A—for riverbottom and irrigated land composed of equal parts of Smooth Bromegrass, Slender Wheatgrass, Alta Fescue, Northern Cossack alfalfa and Domestic Ryegrass. Comes up three weeks earlier in the spring than other pasture mixtures and stays greener late in the fall. Produces most meat per acre.

50 lbs. \$11.50; 100 lbs. \$22.00

DRYLAND Pasture B—grow more beef and wool in low rainfall area. Furnished nearly three times the grazing capacity and three times as many pounds of beef and mutton per acre as native range. Composed of equal parts: Crested Wheatgrass, Dwarf Sweetlover, Smooth Bromegrass, Slender Wheatgrass and Domestic Ryegrass.

50 lbs. \$11.50; 100 lbs. \$22.00

DOUBLE DUTY PASTURE

If Livestock Could Talk—No doubt they would say in late winter: "If we could only hold out until spring, we would get all the grazing we could ever want from Smooth Bromegrass and Cossack Alfalfa." . . . More Meat, Milk and Wool have been produced from Brome-Alfalfa pastures than from all other pasture mixtures combined. For strictly No. 1 quality-seed, free from foul weeds—a 50-50 mixture of Lincoln Bromegrass and Cossack Alfalfa seed.

100 lbs. \$29.50

GROW QUICK PASTURE MIXTURE

This mixture consists of 3 parts of Sweet Clover, 3 Ryegrass, 15 parts Rye and 2 parts Dwarf Essex Rape.

The Ryegrass and Rye in this combination are the fastest growers and afford the earliest feed. Meanwhile, the Sweet Clover and Rape are developing to increase the pasture production and value. They will keep growing until after frost. The Sweet Clover and most of the Ryegrass of course live over winter and can be used the next year for plowing under, for continued pasture, or cut for hay.

Sow 20 lbs. per acre. Sow about the time you sow small grain. Do not use a nurse crop.

50 lbs. \$4.50; 100 lbs. \$8.50 including bags

PERMANENT MIXTURES

Cattle grazing on Thorpe & Water Ranch seeded to Bober's Brome-Alfalfa Mixture

More Beef and Milk Per Acre From
BEEF AND MILK MAKER SPECIAL

A new pasture mixture for fertile lands for higher profits per acre. Composed of 4 parts Lincoln Bromegrass, 4 parts Alta Fescue, 4 parts Ryegrass, 1 part new Rhizoma pasture-type alfalfa and 1 part of Ladino clover. For most money per acre plant at the rate of 14 lbs. per acre.

50 lbs. \$15.50; 100 lbs. \$30.00

PRODUCE BEEF AT LEAST COST PER POUND

ESPECIALLY FOR YOU

Custom Blended Pasture and Hay Mixtures

Our years of experience in charge of pasture experiments for the U. S. Department of Agriculture and on our own 15,000-acre ranch are AT YOUR SERVICE.

Describe your land, moisture conditions and pasture needs, and we will try to prescribe the pasture grasses and legumes best suited for your farm.

Or if you desire to add or subtract from pasture mixtures we list, something special you figured out for your needs, we will be pleased to custom blend the mixture you wish—restricted to orders of 100 lbs. or more.

GRASS FOR ALKALI LAND

	50 lb.	100 lb.
Tall Wheatgrass	\$17.50	\$34.00
Reed Canary Grass	25.50	50.00
Western Wheatgrass	26.50	52.00
Slender Wheatgrass	11.50	22.00

DOLLARS You Will Get More Grazing & CENTS
With New RHIZOMA ALFALFA

Rhizoma alfalfa has wide low-set crowns that send up twice as many stems as present narrow crown types. . . . In spaced plantings crowns may be 18 to 24 inches in diameter after two years of growth. This is about three times the size of present varieties, the most ability to withstand cold and drought and to take rough treatment. RHIZOMA will produce more DOLLARS and CENTS in BEEF and WOOL per acre.

RANCHER SORGHUM

Sweet and Safe

A South Dakota Experiment Station introduction that saves stockmen thousands of dollars by preventing losses from acid poisoning and gives us a **most dependable drought-resistant safe forage**. RANCHER SORGHUM is a variety developed by crossing and recrossing Low Acid selections from Dakota Black Amber Cane and eliminating most of the hydro-cyanic acid.

This plant with its **sweet** leafy stalk has produced six and one-half tons of forage and 2,260 pounds of grain per acre.

50 lbs. \$4.50; 100 lbs. \$8.50

WACONIA CANE

A selection of Rox Orange—and very popular in the midwest where it is used both for forage and syrup. Under favorable moisture conditions it will grow to a height of 8 to 9 feet. Good yielder.

50 lbs. \$4.50; 100 lbs. \$8.50

RELIANCE SORGHUM

Reliance is an extra early maturing combine grain sorghum developed by Clifford Franzke of the South Dakota Experiment Station for the needs of western and southwestern farms. Two weeks earlier maturing than other varieties and higher yielding, averaging 50 bu. per acre on dry land.

Seed cluster is long and open, which allows for drying of the grain. Seed germinates rapidly at low temperatures and under limited soil moisture conditions. Differs from other varieties in that it stands up well even after killing frost. The feed value of Reliance is nearly equal to corn. Plant 4-6 lbs. per acre in rows like corn.

100 lbs. \$4.95

NEW PIPER SUDAN

Plant scientists began work some years ago to reduce the Prussic Acid content and increase the palatability of Sudan. The result is PIPER SUDAN, which, because of its low acid content, high yielding ability and sweet stalk that cattle crave, is rapidly gaining favor. We know you'll really like this one.

100 lbs. \$10.50

SUDAN GRASS

The perfect summer pasture and annual hay plant, whether you live in eastern states, north, south or in the west. Grows rapidly and thrives in the hot dry months when other pastures are least productive.

Sweet Sudan Grass has the grassy character of Common Sudan plus juicy sweetness that livestock want. Sweet Sudan grows taller than Common Sudan, has more and wider leaves, non-shattering seed head, and is resistant to drought and disease. No. 1 pasture for July and August.

Plant 10 to 20 lbs. per acre depending on rainfall.

Standard Sudan—50 lbs. \$4.50; 100 lbs. \$8.00

Sweet Sudan—50 lbs. \$5.00; 100 lbs. \$9.50

PROF. HANSEN'S PROSO GRAIN AND HAY MILLET For Chickens and Turkeys

We'd like to see you try Prof. Hansen's Proso Grain Millet in your ration. This high protein feed is necessary for heavy production. It will keep your chickens healthy and will produce many more eggs. Turkey's fatten on Proso easier than on corn, because of its higher protein content and they keep healthier.

A field of Proso that yielded 75 bushels of grain per acre

A Grain Crop in Sixty Days

This Russian introduction yields fifty to eighty bushels per acre. It takes only sixty to seventy days to mature a grain crop. This is one of the most versatile crops in the country and can be grown everywhere, on dry land and on irrigated land, low land or upland. It can be cut for hay or matured for grain which makes a wonderful chicken food and can also profitably be used for fattening turkeys and livestock. We counted 1,500 kernels on one plant of Proso.

On dry land, plant twenty pounds per acre, any time from May 1 to August 1. In sections with better rainfall, plant it at the rate of 35 pounds per acre with a grain drill. Harvest the same as you do grain.

50 lbs. \$3.00; 100 lbs. \$5.50

Mighty High in Goodness—Mighty Low in Price

KURSK SIBERIAN HAY MILLET

The most drought resistant hay producing plant in the Great Plains states. Produces a hay crop with less rainfall and in shorter time than any other plant. On dry upland plant 15 to 20 pounds of the millet seed per acre, any time from 1st of May to 1st of August.

50 lbs. \$3.50; 100 lbs. \$6.00

Allows you a choice of the best producing Hybrids for irrigated and dryland, to mature fully before frost in the relatively short growing seasons in Montana, Western Dakota and in Eastern Wyoming.

Here you have the earliest maturing Hybrids that yield best in the short season country . . . Hybrids that germinate rapidly and grow vigorously in the seedling stage . . . Hybrids that are perfectly Planter Plate Graded and **TWP treated to protect every kernel** not only against soil-borne diseases, but also against hidden soil insects that attack seed.

KE1

**Highest Yielding 80-Day Maturity Hybrid
most popular corn for dry land**

A cross between flint and early dent inbreds producing a semi-dent hybrid with the early maturity of Falconer . . . but with taller, leafier plants . . . more uniform ears . . . deeper kernels . . . larger yield . . . Produces tall non-suckering plants with unusual stalk strength and high ear placement . . .

1 bu. \$12.20

KE3

The earlier pure yellow dent . . . matures in 80 days . . . Produces a big sturdy plant, with plenty of wide green leaves . . . ears placed high . . . at uniform level for easy mechanical picking. Big yields of both grain and fodder. Regular Flat Kernels.

1 bu. \$12.20

KE2

A pure yellow dent of beautiful ears . . . 85-day maturity. . . . Has the same rapid plant development under all kinds of spring conditions. . . . Large plants with many large leaves, well placed ears, and stalks that stand up. . . . Husks open early in fall . . . permitting early drying and safe cribbing. . . . Large ears . . . with fully dented kernels. . . . Easily picked by machine or by hand. Here is a Hybrid that matures early every year in short season country.

1 bu. \$12.20

KE1

Approximately the same maturity as the Haney strain Minnesota No. 13 . . . makes a beautiful field of dark green plants with ears that ripen while plants are still green . . . it picks on dry days when other hybrids cannot be picked . . . and because of early drying it can be safely cribbed ahead of other corn. Regular Flat Kernels. . . . 90-day maturity.

1 bu. \$12.20

CORN

Early Maturity High Yielding

BOBER'S W-341 and W-355 HYBRID CORN

Jack Bober in a field of Hybrid 341 on the Bober Seed Farms.

W341—Especially recommended for fertile and well-watered land. A 90-day beautiful Yellow Dent Hybrid, with tremendous eye-appeal in the field, wagon box and crib. Large plants, high ears, and a stalk that stands up. Just cob enough to hold the kernels together. Survives cold springs and ripens before earliest frosts. Top yielder in northern country.

W270—85-day maturity—otherwise same characteristics as 341.

W255—80 day maturity—Ears of good size, deep kernels, small cob, high shelling percentage.

W355—Equals any other 90-day Hybrid in grain yields, and leads them all for silage production.

Medium Flat Graded Kernels—1 bu. \$8.50; 5 bu. \$40.00

Round Kernels—1 bu. \$6.00; 5 bu. \$29.50

WHEATLAND

A Blend of Extra Early Hybrids for pasturing off, silage and grain at low cost.

Produces a mature crop of grain on sturdy stalks that stand up for mechanical picking . . . used by cattlemen to pasture off and fatten steers in the field . . . Wheatland Blend is made up of round kernels suited to planting with standard drill plates or grain drills.

\$7.30 per bu.

BOBER'S OPEN POLLINATED SEED CORN

Recommended for dry land, short season . . . higher altitudes.

Gehu Flint—70-day corn—unexcelled for hogging and sheeping off; drought, frost and hail resistant. Its feeding qualities the highest of any corn, because of high oil content. Earliest corn in America.

\$6.00 per bu.

Falconer—75-day yellow semident—the best yielding of early maturing, open pollinated corn. Also used for hogging down and sheeping off.

\$5.50 per bu.

Payne's White Dent—80-day corn—record yield of 91 bushels per acre, a consistent good yielder. Also used for hogging off.

\$4.75 per bu.

Black Hills Special—85 to 90 days, higher yielding yellow dent. **\$4.85 per bu.**

Early Minnesota No. 13 Yellow Dent.
\$4.85 per bu.

Squaw Flour Corn—80-85-day maturity.
\$5.50 per bu.

Early Northwest Dent (red and white cap)—Leafy, 85-90-day corn. **\$4.75 per bu.**

Rainbow Flint—Highest yield for silage corn, for open pollinated corn. **\$4.90 per bu.**

Quality ANGUS CATTLE raised on Wheatgrass pastures on the higher altitude on the foothills of the Black Hills. Yearling and 2-year old Bulls For Sale.
Bober Farms, Newell, S. D.

OATS

BRUNKER OATS No. 2054 **is still champion**

in the West and in the great Southwest. When planted real early, the Brunker Oats outyield all other varieties we have planted alongside them in variety trials. **The record of 107 bushels per acre they made here a few years ago still stands at top, especially on non-irrigated land. Brunker Oats are frost resistant . . . they are also smut, rust and helminthosporium resistant . . . they are the EARLIEST MATURING and HIGHEST YIELDING in Great Plains states.**

10 bu. \$16.50; 20 bu. or more, \$1.60 per bu., including bags

NEW DUPREE OATS

Here is a new dryland oat developed by the South Dakota State College which shows real promise. Not recommended for irrigated land but very adapted to dryland areas where early maturity and drought resistance are important. In special experiments Dupree Oats stood 118 degree temperatures with limited moisture conditions without damage. Good straw of medium height. Next to Brunker Oats in early maturity and a good plump grain with a yellowish cast. Order early—Supply Limited!

10 bu. \$18.50; 20 bu. or more, \$1.80 per bu., including bags

CHEROKEE OATS

are rapidly gaining favor under dry land conditions in South Dakota and bordering states. The grain has a slight yellowish cast, is short, plump and with good test weight. Cherokee matures about five days earlier than Clinton Oats. It is resistant to Victor Blight and most races of smut and rust. Recommended for creek bottom land.

10 bu. \$16.50; 20 bu. or more, \$1.60 per bu., including bags

James HULLESS OATS

This new HULLESS Oats was developed by the South Dakota Experiment Station to fulfill a demand for a disease resistant, high yielding Hulless Oats, **which is an ideal feed for pigs and poultry.**

It is medium maturity, average height 33 inches, stiff strawed, moderately resistant to stem rust and leaf rust. It is resistant to helminthosporium, foot-rot, and to the oat smuts. **It outyields standard varieties.** On our own land we plant 30 pounds James Hulless Oats seed per acre. **These oats test 19.1 per cent protein.**

50 lbs. \$4.00; 100 lbs. \$7.50

BARLEY AND FLAX

PLAINS the 'Heads Up' Barley

A new six-rowed, smooth-awned, **EARLY MATURING**, short growing, stiff strawed, feed type barley. **Resistant to stem rust and drought.** Best adapted to central and northern sections of Iowa, Nebraska, Wyoming and South Dakota. Introduced by the South Dakota Experiment Station. In the past two years of moderate and below average rainfall, it has produced the most bushels of feed barley on our farms. Combines good.

\$1.90 per bushel

SPARTAN BARLEY EVADES DROUGHT

Ripens Ahead of Hoppers, Drought and July Heat

The earliest maturing and one of the highest yielding varieties. It is a two row, smooth bearded, easier to handle and equals corn in feeding value, weighing 56 pounds per bushel. **IT ESCAPES** drought rather than resists it.

\$1.85 per bushel

MARINE FLAX

MARINE FLAX, a new U. S. Department of Agriculture release, is an early maturing brown seeded, blue blossom variety. Performance results in North Dakota, Minnesota and South Dakota have been excellent. Highly wilt resistant and completely resistant to all North American races of flax rust. Just a few days later than Sheyenne in maturity.

5 bu. \$35.50; 10 bu. or more, \$6.80 per bu., including bags

SHEYENNE FLAX

Highest yielding and **earliest maturing** variety of Flax for dry land. Matures a week to ten days earlier than other varieties and is more disease resistant. **The best CASH CROP and the best NURSE Crop to plant with alfalfa and grass seed.** One bushel plants 3 acres of dry land. Plant $\frac{1}{2}$ bushel per acre on fertile land.

5 bu. \$35.00; 10 bu. or more at \$6.75 per bu., including bags

WHEAT

Sam Bober in a Field of New Rushmore Wheat.

High-Protein Disease-Resistant Bread-Type Spring Wheat for Low-Rainfall Areas

Beware of 15B Rust—Plant SELKIRK WHEAT

During the past three years millions of dollars worth of spring wheat was lost because of the effect of rust on our wheat. Selkirk is the first variety of wheat to show real resistance to rust and at the same time have high yielding ability, early maturity, good stiff straw, and excellent milling qualities. Our seed is of the highest quality, and for your insurance is Registered Blue Tag and sealed.

RUSHMORE SPRING WHEAT

The Wheat with the "Growth Factor"

Earliness, Stiff-Straw, Resistance to Shattering, and high yield are some of the qualities of this wheat. It is a beardless, disease resistant (especially to black stem rust), high milling quality wheat and combines the good points of standard varieties, Pilot, Rival and Mida. Rushmore wheat produced on the virgin land of the Bober Farms on dry land tested 18.6 per cent protein, the highest test for South Dakota, commanding highest premium on the grain market.

Wider Drill Rows Give Better Alfalfa Stands

We all like shade on hot summer days, and livestock does better if you give them some sort of protection in hot weather. . . . But not alfalfa or clover. They need sunshine. If you use a nurse crop it makes a difference how you plant your grain, if you are trying to get a good stand of legumes.

In tests with oats and alfalfa-bromegrass at Iowa State College, drilling the oats in rows 14 inches apart gave the alfalfa and brome plants more sunlight than broadcasting. As a result, they counted a fourth more alfalfa plants, and almost twice as many brome plants, in the drilled grain than in the broadcast oats.

Ask us to treat your alfalfa seed with ARASAN for a thicker healthier stand.

BOBER'S NORTHERN VEGETABLE SEED

For Taste, Early Maturity and Yield

Be sure to include in your order New Bounty Tomato and Hybrid Sweet Corn.

BOBER'S 30-DAY RICHGREEN LAWN GRASS

For a Beautiful Lawn
All Season

Order Bober's "30-Day Lawn Grass" early and sow it as soon as the snow melts away in early spring. Sow one pound to 250 square feet and you will have a well established lawn by early summer. This mixture consists of fine leaved and deep rooted perennial grass and some White Dutch Clover, which assures a beautiful rich green lawn thick and free from weeds.

Unsurpassed for open sunny spaces. Adapted to areas of moderate shade.

1 lb. 80c; 3 lbs. \$2.30
5 lbs. \$3.25; 10 lbs. \$7.00

Richgreen Lawn Grass

MERION BLUEGRASS

The newest turf grass, an improved Kentucky Bluegrass; it is more drought resistant, can be cut closer than other grasses, very hardy with a strong spreading root system. Recommended seeding rate—only 1 lb. to 500 square feet.

1 lb. \$4.50; 5 lbs. \$22.75 postpaid

HIGH QUALITY PURE KENTUCKY BLUEGRASS SEED

1 lb. 90c; 5 lbs. \$4.50; 10 lbs. or more, 85c per lb.

WHITE DUTCH LAWN CLOVER—Extra Fancy Seed

CREEPING RED FESCUE

1 lb. 45c; 5 lbs. \$2.00; 10 lbs. \$3.90

For Dry Land Lawns

FAIRWAY STRAIN OF CANADIAN CRESTED WHEATGRASS

1 lb. 75c; 5 lbs. \$3.50

BUFFALO GRASS

Makes Wonderful Lawns in Dry Climate Regions

In the lighter sandier soils, and the dry and semi-dry regions Buffalo Grass has proven highly desirable for lawn use. It is a low growing plant, seldom getting over 6 inches in height; hence needs no cutting and requires very little care. Since it thickens by means of stolons as well as from seed, once you get a thin stand established, it thickens up all by itself.

One pound covers 3,000 square feet, \$1.60

ORDER BLANK

Your Money's Worth or Your Money Back—It is mutually agreed and understood that any seeds ordered of us may be returned at any time within ten days after receipt, if not satisfactory, and money for them will be refunded, but we do not and cannot in any way warrant the stand or the crop as they depend on so many conditions beyond our control.

SAM H. ROBER & SONS.

Field seeds are subject to market price changes after February 15

Showing double root system of three-year-old Cossack alfalfa, also the stooling habit above the crown, which makes bushier, finer stemmed and immense yields of leafier, more nutritious hay and pasture.

Bober's Northern Black Hills hardy alfalfa seed is dry land grown on the northern foothills of the Black Hills at elevations of from 3,000 to 4,500 feet. It is subjected to 30 to 40 degrees below zero in winter and 110 degrees hot and dry temperatures in summer, which by eliminating the weaker plants produce seed from the hardiest plants noted for their productivity and drought resistance.

This seed is cleaned and sacked in branded bags at our cleaning plant and warehouses at Rapid City, South Dakota, and can always be identified by the Bober trademark on the bags—your assurance of hardiness, high yielding ability and long life.

LOUIS M. BOBER
Manager of Bober Seed House
at Rapid City, South Dakota

JACK BOBER
Assistant Manager
of Bober Seed House
at Rapid City, S. D.

what do your neighbors think ... about BOBERS seeds?

As to the Rhizoma Alfalfa, we are well pleased as we seeded it in a mixture with other grasses and then in July had to bring our sheep in to get them off the needle grass range. They ate all of the young seedlings right into the ground, but in spite of that it showed a good stand of alfalfa this fall.

C.R.H.
Winnett, Montana

This makes 3 years we have ordered alfalfa seed from you and I find it the best producing seed in all of my 40 years of farming.

E.W.
Racine, Minnesota

I received my Cossack Alfalfa Seed. Hope I have as good results from this planting as I did on the field I just plowed up. This field was cut for hay six years and pastured one. I don't know of another alfalfa field in this vicinity that has lasted as long. My neighbor planted Cossack three years ago when he saw the results I was having and he also has a fine field stand of Cossack. Thank you for the splendid service.

L.S.M., Parma, Michigan

Our farms are located in what the men here call a "rugged" climate. The winters are severe. We cannot plan on snow coverage and so we must use seed of the hardest possible varieties. Your seeds fit this climate fine.

M.H.K.
Warnersville, New York

Two years ago I purchased one bushel of your Siberian Cossack Alfalfa. I am glad to report your Cossack has withstood the terrible drought Missouri has had the last two years.

F.H.S.
Florissant, Missouri

I seeded about 1½ acres to Rhizoma alfalfa and Ladino clover 2 years ago. Last year I cut 75 bales the first cutting and 45 the second cutting besides 30 hogs ran on it continuously during that time.

I believe my 1954 purchase was some Siberian Cossack, Ladak, and Rambling Rhizoma. All of these came thru a drouth summer and are now excellent stands.

C.O.S.
Pittsfield, Illinois
